

The legacy CPR HCP course included CPR Level A or C content, then added the skills required for HCP certification. In the BLS course, skills are fully integrated throughout, and do not build on CPR Level A or C content. BLS is a <u>skills-focused</u> professional resuscitation course, and <u>not</u> a first aid-based CPR course. Terminology between the two programs is different and not fully reflective in this comparison.

Key: Black = HCP Red = BLS

Where possible skills were merged in this chart.

CPR HCP and BLS Course Comparison Subjects and Skills	CPR HCP Theory	CPR HCP Skill	BLS Theory	BLS Skill
Introduction
